

## Identifying Way Cover Wiper Material

Over the years, Fadal Engineering utilized several manufacturers for designing and building their way cover systems. With this diversity, you can imagine that everyone had their own ideas on what wiper material was best as the covers were made and distributed, however trying to just purchase the replacement wiper material has become a bit confusing.

While most wiper material out there is the CVR-0127 & CVR-0127A style, there are other types and we offer them all. If you are uncertain what you have, remove one of your machine's way covers and pull out the wiper material. Match it up with those shown to the left and give us a call. We stock it all.
